The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The results are presented in the following table:

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.001	0.001	1.2	0.23
Gender of the head of household	0.002	0.001	1.5	0.13

The results indicate that the age of the head of household has a positive but statistically insignificant effect on the number of children in the household. Similarly, the gender of the head of household has a positive but statistically insignificant effect on the number of children in the household.
